Preface

Most software development projects apply modelling in some stages of development and to various degrees in order to take advantage of the many and varied benefits of it. Modelling is, for example, applied for facilitating communication by hiding technical details, analysing a system from different perspectives, specifying its structure and behaviour in an understandable way, or even for enabling simulations and generating test cases in a mode-driven engineering approach. Thus, the evaluation of modelling techniques, languages and tools is needed in order to assess their advantages and disadvantages, to ensure their applicability to different contexts, their ease of use, and other issues such as required skills and costs; either isolated or in comparison with other methods.

The need to reflect and advance on empirical methods and techniques that help improving the adoption of software modelling in industry led us to organize two editions of the International Workshop on Experiences and Empirical Studies in Software Modelling that was held in Wellington (EESSMod 2011) and Innsbruck (EESSMod 2012) conjunction with the ACM/IEEE International Conference on Model Driven Engineering Languages and Systems (MoDELS). The third edition of the workshop will be held in Miami during MODELS 2013. The main purpose of the workshop is to bring together professionals and researchers interested in software modelling to discuss in which way software modelling techniques may be evaluated, share experiences of performing such evaluations and discuss ideas for further research in this area. The workshop accepted both experience reports of applying software modelling in industry and research papers that describe more rigorous empirical studies performed in industry or academia.
These proceedings collect the papers presented at the Workshop. All the submitted papers were peer-reviewed by three independent reviewers. The accepted papers (4 full papers and 4 short papers) discuss theoretical and practical issues related to experimentation in software modelling or the use of modelling techniques in industry.

We would like to thank the authors for submitting their papers to the Workshop. Also thanks to Prof. Lionel Briand from University of Luxembourg, who will give a very interesting keynote speech. We are also grateful to the members of the Program Committee for their efforts in the reviewing process, and to the MoDELS 2013 organizers for their support and assistance during the workshop organization. More details on the Workshop are available at http://users.dsic.upv.es/workshops/eessmod13.

Gothenburg, Ciudad Real, Valencia, 24 September 2013

Teresa Baldassarre, Università degli Studi di Bari, Italy
Narasimha Bolloju, City University of Hong Kong, China
Danilo Caivano, Università degli Studi di Bari, Italy
Jeffrey Carver, University of Alabama, USA
Karl Cox, University of Brighton, UK
José Antonio Cruz-Lemus, University of Castilla-La Mancha, Spain
Holger Eichelberger, Universität Hildesheim, Germany
Felix Garcia, University of Castilla-La Mancha, Spain
Carmine Gravino, University of Salerno, Italy
Brian Henderson-Sellers, University of Technology, Sydney, Australia
Yvan Labiche, Carleton University, Canada
Jan Mendling, Humboldt-University Berlin, Germany
Parastoo Mohagheghi, NTNU, Norway
James Nelson, Southern Illinois University, USA
Jeffrey Parsons, Memorial University of Newfoundland, Canada
Keith Phalp, Bournemouth University, UK
Giuseppe Scanniello, Università degli Studi della Basilicata, Italy
Dag Sjøberg, University of Oslo, Norway
Keng Siau, Missouri University of Science and Technology, USA
Marco Torchiano, Politecnico di Torino, Italy
Barbara Weber, University of Innsbruck, Austria
Jon Whittle, Lancaster University, UK
Content

Preface i

Program committee iii

Research-Based Innovation in Model-Driven Engineering: Project Experience and Lessons Learned* (Keynote Speech) .................................................. 1
Lionel Briand

What are the used UML diagrams? A Preliminary Survey ......................... 3
Gianna Reggio, Maurizio Leotta, Filippo Ricca and Diego Clerissi

Model-based Simplified Functional Size Measurement - an Experimental Evaluation with COSMIC Function Points .................................................. 13
Vieri Del Bianco, Luigi Lavazza, Geng Liu, Sandro Morasca and Abedallah Zaid Abualkikshik

UML usage in Open Source Software Development: A Field Study ............ 23
Hafeez Osman and Michel R. V. Chaudron

Exploring Costs and Benefits of Using UML on Maintenance: Preliminary Findings of a Case Study in a Large IT Department .................................... 33
Ana M. Fernández-Sáez, Michel Chaudron and Marcela Genero

Towards Reconstructing the Architecture of Software Development Tools by Runtime Analysis .................................................................................. 43
Ian Peake, Jan Olaf Blech and Lasith Fernando

Industrial Adoption of Automatically Extracted GUI Models for Testing ...... 49
Pekka Aho, Matias Suarez, Teemu Kanstren and Atif Memon

What do metamodels really look like? ...................................................... 55
James Williams, Athanasios Zolotas, Nicholas Matragkas, Louis Rose, Dimitris Kolovos, Richard Paige and Fiona Polack

Online Img2UML Repository: An Online Repository for UML Models ........ 61
Bilal Karasneh and Michel Chaudron
