Preface

Modularity has been and continues to be one of the central research topics in ontology engineering. The number of ontologies available, as well as their size, is steadily increasing. There is a large variation in subject matter, level of specification and detail, intended purpose and application. Ontologies covering different domains are often developed in a distributed manner; contributions from different sources cover different parts of a single domain. Not only is it difficult to determine and define interrelations between such distributed ontologies, it is also challenging to reconcile ontologies which might be consistent on their own but jointly inconsistent. Further challenges include extracting the relevant parts of an ontology, re-combining independently developed ontologies in order to form new ones, determining the modular structure of an ontology for comprehension, and the use of ontology modules to facilitate incremental reasoning and version control.

Modularity is envisaged to allow mechanisms for easy and flexible reuse, combination, generalization, structuring, maintenance, collaboration, design patterns, and comprehension. This is analogous to the role of modularity in software engineering, where there are well-understood notions of modularity that have led to generally accepted and widely supported mechanisms for the named tasks. In contrast, modularity for ontologies is still an active research field with open questions because existing approaches are heterogeneous and less universally applicable. For ontology engineering, modularity is central not only to reducing the complexity of understanding ontologies, but also to maintaining, querying and reasoning over modules. Distinctions between modules can be drawn on the basis of structural, semantic, or functional aspects, which can also be applied to compositions of ontologies or to indicate links between ontologies.

In particular, reuse and sharing of information and resources across ontologies depend on purpose-specific, logically versatile criteria. Such purposes include “tight” logical integration of different ontologies (wholly or in part), “loose” association and information exchange, the detection of overlapping parts, traversing through different ontologies, alignment of vocabularies, module extraction possibly respecting privacy concerns and hiding of information, etc. Another important aspect of modularity in ontologies is the problem of evaluating the quality of single modules or of the achieved overall modularization of an ontology. Again, such evaluations can be based on various (semantic or syntactic) criteria and employ a variety of statistical/heuristic or logical methods.

Recent research on ontology modularity has produced substantial results and approaches towards foundations of modularity, techniques of modularization and modular developments, distributed and incremental reasoning, as well as the use of modules in different application scenarios, providing a foundation for further research and development. Since the beginning of the WoMO workshop series, there has been growing interest in the modularization of ontologies, modular development of ontologies, and information exchange across different modular ontologies. In real life, however, integration problems are still mostly tackled
in an ad-hoc manner, with no clear notion of what to expect from the resulting ontological structure. Those methods are not always efficient, and they often lead to unintended consequences, even if the individual ontologies to be integrated are widely tested and understood.

**Topics** covered by WoMO include, but are not limited to:

*What is Modularity?*
- Kinds of modules and their properties
- Modules vs. contexts
- Design patterns
- Granularity of representation

*Logical/Foundational Studies*
- Conservativity and syntactic approximations for modules
- Modular ontology languages
- Reconciling inconsistencies across modules
- Formal structuring of modules
- Heterogeneity

*Algorithmic Approaches*
- Distributed and incremental reasoning
- Modularization and module extraction
- Sharing, linking, and reuse
- Hiding and privacy
- Evaluation of modularization approaches
- Complexity of reasoning
- Implemented systems

*Application Areas*
- Modularity in the Semantic Web
- Life Sciences
- Bio-Ontologies
- Natural Language Processing
- Ontologies of space and time
- Ambient intelligence
- Social intelligence
- Collaborative ontology development and ontology versioning

**Previous events.** The WoMO 2013 workshop follows a series of successful events that have been an excellent venue for practitioners and researchers to discuss latest work and current problems. It is intended to consolidate cutting-edge approaches that tackle the problem of ontological modularity and bring together researchers from different disciplines who study the problem of modularity in ontologies at a fundamental level, develop design tools for distributed ontology engineering, and apply modularity in different use cases and application scenarios. Previous editions of WoMO are listed below. The links refer to their homepages and proceedings.
WoMO 2006. The 1st workshop on modular ontologies, co-located with ISWC 2006, Athens, Georgia, USA. Invited speakers were Alex Borgida (Rutgers) and Frank Wolter (Liverpool). Organizers and program chairs were
http://www.cild.iastate.edu/events/womo.html
http://sunsite.informatik.rwth-aachen.de/Publications/CEUR-WS/Vol-232

WoMO 2007. The 2nd workshop, co-located with K-CAP 2007, Whistler BC, Canada. The invited speaker was Ken Barker (Texas at Austin).
http://sunsite.informatik.rwth-aachen.de/Publications/CEUR-WS/Vol-315

WoRM 2008. The 3rd workshop in the series, co-located with ESWC 2008, Tenerife, Spain, entitled ‘Ontologies: Reasoning and Modularity’ had a special emphasis on reasoning methods.

This volume contains the papers presented at the 7th International Workshop on Modular Ontologies (WoMO 2013) held on September 15, 2013 in Corunna,
Spain as a satellite event of the conference LPNMR 2013. We received 9 submissions. Each submission was reviewed by three program committee members. The committee decided to accept five papers for long or short presentations. The program also included two invited talks:

– Till Mossakowski (University of Bremen, Germany)
  *The Distributed Ontology, Modeling and Specification Language*

– George Vouros (University of Piraeus, Greece)
  *Combining ontologies in settings with multiple agents*

**Acknowledgments.** We would like to thank the PC members and the additional reviewers for their timely reviewing work, our invited speakers for delivering keynote presentations at the workshop, and the authors and participants for contributing to the workshop program. We would also like to thank the organizers of LPNMR 2013 for hosting the WoMO workshop, the IAOA and SINTELNET for their generous financial support, and the EasyChair developers for greatly simplifying the work of the program committee.

Table of Contents

Summaries of Invited Talks

The Distributed Ontology, Modeling and Specification Language ........ 1
   Till Mossakowski, Oliver Kutz, Mihai Codescu and Christoph Lange

Combining ontologies in settings with multiple agents ................. 22
   George Vouros

Regular Papers

Modularization of Graph-Structured Ontology with Semantic Similarity . 25
   Soudabeh Ghafourian, Mahmoud Naghibzadeh and Amin Rezaeian

Implementation and Evaluation of Forgetting in ALC-Ontologies ........ 37
   Patrick Koopmann and Renate A. Schmidt

Module Extraction for Acyclic Ontologies ............................... 49
   William Gatens, Boris Konev and Frank Wolter

Fast atomic decomposition using axiom dependency hypergraphs ........ 61
   Francisco Martín-Recuerda and Dirk Walther

Short Papers

Towards a Unified Approach to Modular Ontology Development Using
   the Aspect-Oriented Paradigm ...................................... 73
   Ralph Schäfermeier and Adrian Paschke
Program Committee

Kenneth Baclawski  
Northeastern University, Boston, USA

Eva Blomqvist  
Linköping University, Sweden

Alex Borgida  
Rutgers University, Piscataway, USA

Stefano Borgo  
Laboratory for Applied Ontology, ISTC-CNR, Trento, Italy

Gerhard Brewka  
University of Leipzig, Germany

Mike Dean  
Raytheon BBN Technologies, Ann Arbor, USA

Chiara Del Vescovo (co-chair)  
The University of Manchester, UK

Thomas Eiter  
Technical University of Vienna, Austria

Pawel Garbacz  
The John Paul II Catholic University of Lublin, Poland

Dagmar Gromann  
Vienna University of Economics and Business, Austria

Michael Gruninger  
University of Toronto, Canada

Torsten Hahmann (co-chair)  
University of Toronto, Canada

Robert Hoehndorf  
University of Cambridge, UK

Dieter Hutter  
DFKI GmbH, Bremen, Germany

Tomi Janhunen  
Aalto University, Finland

Pavel Klinov  
University of Ulm, Germany

Christoph Lange  
University of Birmingham, UK

Thomas Meyer  
CSIR Meraka Institute, Pretoria, South Afrika

Leo Obrst  
MITRE, McLean, VA, USA

David Pearce (co-chair)  
Universidad Politécnica de Madrid, Spain

Marco Schorlemmer  
IIIA-CSIC, Barcelona, Spain

Luciano Serafini  
Fundazione Bruno Kessler, Trento, Italy

Dmitry Tsarkov  
The University of Manchester, UK

Dirk Walther (co-chair)  
TU Dresden, Germany
