Preface

The MPM workshop series brings together researchers and practitioners interested in using explicit and heterogeneous models throughout the design of a system. The 7th edition took place on 30 September 2013 and was co-located with MODELS’13 in Miami.

Out of the 10 papers submitted and reviewed by at least three members of the program committee, 5 were selected for oral presentation and 2 as posters. About 30 participants attended this edition of the workshop. A vote was cast among the participants of the workshop to elect the best presentation. Markus Voelter’s presentation was chosen unanimously.

In addition to the presentation of the selected papers from the technical program, MPM’13 featured an invited presentation by Bernhard Rumpe who talked about compositional multi-paradigm models for software development.

This volume contains versions of the selected papers that the authors had the opportunity to enhance after the workshop and the fruitful discussions that occurred during the whole day. The papers where collected using the EasyChair conference system, formatted according to the LNCS style, and assembled using pdflatex and the pdfpages package.
