Preface

These are the proceedings of the International Workshop on Petri Nets and Software Engineering (PNSE’14) in Tunis, Tunisia, June 23–24, 2014. It is a co-located event of Petri Nets 2014, the 35th international conference on Applications and Theory of Petri Nets and Concurrency and ACSD 2014, the 14th International Conference on Application of Concurrency to System Design. More information about the workshop can be found at:

http://www.informatik.uni-hamburg.de/TGI/events/pnse14/

For the successful realisation of complex systems of interacting and reactive software and hardware components the use of a precise language at different stages of the development process is of crucial importance. Petri nets are becoming increasingly popular in this area, as they provide a uniform language supporting the tasks of modelling, validation, and verification. Their popularity is due to the fact that Petri nets capture fundamental aspects of causality, concurrency and choice in a natural and mathematically precise way without compromising readability.

The use of Petri Nets (P/T-Nets, Coloured Petri Nets and extensions) in the formal process of software engineering, covering modelling, validation, and verification, will be presented as well as their application and tools supporting the disciplines mentioned above.

The program committee consists of:
Kamel Barkouki (Conservatoire National des Arts et Métiers, France)
Robin Bergenthum (University of Hagen, Germany)
Didier Buchs (University of Geneva, Switzerland)
Lawrence Cabac (University of Hamburg, Germany)
Christine Chopy (Paris-North University (LIPN), France)
Piotr Chrząstowski-Wachtel (University of Warsaw, Poland)
José-Manuel Colom (University of Zaragoza, Spain)
Raymond Devillers (Université Libre de Bruxelles, Belgium)
Jorge C.A. de Figueiredo (Federal University of Campina Grande, Brazil)
Luis Gomes (Universidade Nova de Lisboa, Portugal)
Nicolas Guelfi (University of Luxembourg)
Stefan Haar (ENS Cachan, France)
Serge Haddad (ENS Cachan, France)
Xudong He (Florida International University, USA)
Thomas Hildebrandt (IT University of Copenhagen, Denmark)
Lom-Messan Hillah (University P. & M. Curie, LIP 6, France)
Kunihiro Hiraishi (Japan Advanced Institute of Science and Technology, Japan)
Vladimir Janoušek (Brno University of Technology, Czech Republic)
Peter Kemper (College of William and Mary, USA)
Astrid Kiehn (HIT Delhi, India)
Ekkart Kindler (Technical University of Denmark, Denmark)
There is one invited talk by Lars Kristensen from BERGEN UNIVERSITY COLLEGE, NORWAY. We received more than 28 high-quality contributions. For each paper three to four reviews were made. The program committee has accepted five of them for full presentation. Furthermore the committee accepted 13 papers as short presentations and one short paper. Several more contributions were submitted and accepted as posters.

The international program committee was supported by the valued work of following sub reviewers: Sofiane Bendoukha, Maximilien Colange, Tadeusz Czachorski, Markus Huber, Yasir Khan, Görkem Kılınç, Luca Manzoni, Artur Niewiadomski, and Józef Winkowski. Their work is highly appreciated.

Furthermore, we would like to thank our colleagues in the local organization in Tunis, Tunisia, for their support.

Without the enormous efforts of authors, reviewers, PC members and the organizational team this workshop wouldn’t provide such an interesting booklet.

Thank you,
Daniel Moldt and Heiko Rölke
Hamburg, June 2014
Contents

Part I PNSE’14: Invited Talk

An Approach for the Engineering of Protocol Software from Coloured Petri Net Models:
A Case Study of the IETF WebSocket Protocol
Lars Michael Kristensen ........................................ 13

Part II PNSE’14: Long Presentations

Verification of Logs - Revealing Faulty Processes of a Medical Laboratory
Robin Bergenthum and Joachim Schick ............................. 17

On-The-Fly Model Checking of Times Properties on Time Petri Nets
Kais Klati ............................................................... 35

SMT-based Abstract Temporal Planning
Artur Niewiadomski and Wojciech Penczek ......................... 55

Kleene Theorems for Labelled Free Choice Nets
Ramchandra Phawade and Kamal Lodaya .......................... 75

Using Symbolic Techniques and Algebraic Petri Nets to Model Check Security Protocols for Ad-Hoc Networks
Mihai Lica Pura and Didier Buchs .................................. 91
Morphisms on Marked Graphs
Luca Bernardinello, Lucia Pomello and Stefano Scaccabarozzi ..........113

A Petri Net Approach for Reusing and Adapting Components with Atomic and non-atomic Synchronisation
Djaouida Dakhani, Mohand Cherif Boukala and Hassan Mountassir ....129

Observable Liveness
Jörg Desel and Görkem Kılınç ..................................................143

Real-Time Property Specific Reduction for Time Petri Net
Ning Ge and Marc Pantel .........................................................165

Visual Language Plans - Formalization of a Pedagogical
Learnflow Modeling Language
Kerstin Irgang and Thomas Irgang ...........................................181

Slicing High-level Petri Nets
Yasir Imtiaz Khan and Nicolas Guelfi ........................................201

Performance Analysis of M/G/1 Retrial Queue with Finite Source Population Using Markov Regenerative Stochastic Petri Nets
Ikhlef Lyes, Lekadir Ouiza and Djamil Aïssani .............................221

Petri Nets Based Approach for Modular Verification of SysML Requirements on Activity Diagrams
Messaoud Rahim, Malika Boukala-Ioualalen and Ahmed Hammad ......233

Compatibility Analysis of Time Open Workflow Nets
Zohra Sbaï, Kamel Barkaoui and Hanifa Boucheneb ..........................249

Petra: A Tool for Analysing a Process Family
Dennis Schunselaar, Eric Verbeek, Wil van der Aalst and Hajo A. Reijers ..............................................................269

An Evaluation of Automated Code Generation with the PetriCode Approach
Kent Inge Fagerland Simonsen ....................................................289

Fernando Tricas, José Manuel Colom and Juan Julián Merelo ..........307
Part IV PNSE’14: Short Papers

Persistency and Nonviolence Decision Problems in P/T-Nets with Step Semantics
Kamila Barylska .......................................................... 325

Part V PNSE’14: Poster Abstracts

Construction of Data Streams Applications from Functional, Non-Functional and Resource Requirements for Electric Vehicle Aggregators. The COSMOS Vision
José Angel Banares, Rafael Tolosana-Calasanz, Fernando Tricas, Unai Arronategui, Javier Celaya and José Manuel Colom ................. 333

Modular Modeling of SMIL Documents with Complex Termination Events
Djaouida Dahmani, Samia Mazouz and Malika Boukala .................. 335

D&A4WSC as a Design and Analysis Framework of Web Services Composition
Rawand Guerfel and Zohra Sbaï ......................................... 337

Constructing Petri Net Transducers with PNTtool
Markus Huber and Robert Lorenz ........................................ 339

SLAPN: A Tool for Slicing Algebraic Petri Nets
Yasir Imtiaz Khan and Nicolas Guelfi .................................. 343

Generating CA-Plans from Multisets of Services
Łukasz Mikulski, Artur Niewiadomski, Marcin Piątkowski and Sebastian Smyczyński .................................................. 347

LoLA as Abstract Planning Engine of PlanICS
Artur Niewiadomski and Karsten Wolf ................................. 349

PlanICS 2.0 - A Tool for Composing Services
Artur Niewiadomski and Wojciech Penczek ............................. 351

Petri Net Simulation as a Service
Petr Polasek, Vladimir Janousek and Milan Ceska ...................... 353
