Preface

This is the proceedings of the Second Workshop on Probabilistic Logic Programming (PLP 2015), which was held on August 31st 2015 in Cork, Ireland, as a workshop of the 31st International Conference on Logic Programming (ICLP 2015).

Eight papers were submitted to the workshop. Each submission was reviewed by three members of the program committee. All submitted papers were of sufficiently high quality to be accepted to the workshop. In addition, the workshop also had invited talks by Angelika Kimmig (KU Leuven) and Nicos Angelopoulos (Imperial College, London).

This workshop is the second edition in what we hope will be a long series. The first edition was held in 2014 in Vienna, Austria, also as part of the ICLP conference. More information about the current edition, the previous edition, and future editions can be found at the following website:

http://stoics.org.uk/plp/

We would like to thank all authors who submitted papers, all program committee members and all reviewers for their efforts. In addition, we are also grateful to the organisers of ICLP and, in particular, to Mats Carlsson, ICLP’s Workshop Chair.

July 2015

Fabrizio Riguzzi, Joost Vennekens

Contents

Invited Talks

BIMS: for Bayesian inference of model structure
Nicos Angelopoulos
7

Probabilistic (logic) programming: opportunities and challenges
Angelika Kimmig
8

Regular Papers

Advances in integrating statistical inference
Nicos Angelopoulos, Samer Abdallah and Georgios Giamas
9

Towards a General Framework for Actual Causation Using CP-logic
Sander Beckers and Joost Vennekens
19

Most Probable Explanation for MetaProbLog and its application in
Heart Sound Segmentation
Theofrastos Mantadelis, Jorge Oliveira and Miguel Coimbra
39

Constraint-Based Inference in Probabilistic Logic Programs
Arun Nampally and C. R. Ramakrishnan
46

A Hybrid Approach to Inference in Probabilistic Non-Monotonic
Logic Programming
Matthias Nickles and Alessandra Mileo
57

The Distribution Semantics is Well-Defined for All Normal Programs
Fabrizio Riguzzi
69

Probabilistic Abductive Logic Programming using Dirichlet Priors
Calin-Rares Tarliuc, Luke Dickens, Alessandra Russo and Krysia Broda
85
Presented Papers which Appear Elsewhere

Anytime Inference in Probabilistic Logic Programs with Tp-Compilation
