Preface

The AMT workshop series brings together researchers and practitioners interested in the analysis of model transformations in the area of model driven engineering. The 4th edition took place on 28 September 2015 and was co-located with MODELS’15 in Ottawa, Canada.

Out of the 10 papers submitted and reviewed by at least three members of the program committee, 7 were selected for presentation.

In addition to the presentation of the selected papers from the technical program, AMT’15 featured an invited presentation by Edward Willink (Willink Transformations Ltd., UK) and Nicholas Matragkas (University of York, UK) entitled “QVT Traceability: What does it really mean?”.

The workshop also had a keynote by Manuel Wimmer (Vienna University of Technology, Austria) entitled “Search-based Model Transformation Analysis”.

This volume contains versions of the selected papers that the authors had the opportunity to revise by taking into account reviewers’ comments.

We are grateful to all authors, attendees, program committee members, external reviewers and local organizers for helping make AMT 2015 a success.
