VISLA15: 1\textsuperscript{st} international workshop on Visual Aspects of Learning Analytics

organized at the 5th international Learning Analytics and Knowledge conference (LAK15)

The use of visualization techniques for learning is not new. For instance, visualizations have been used in maps and drawings for thousands of years. In a learning analytics context, the application of information visualization techniques can help both teachers and learners to explore and understand relevant user traces that are collected in various (online) environments and to improve (human) learning. The goal of our workshop is to build a strong research capacity around visual approaches to learning analytics. The longer term goal is to improve the quality of learning analytics research that relies on information visualization techniques.

Each contribution to the workshop explicitly addressed the following items:

1. What kind of data is being visualized? What tools were used to clean up the data (if any)?
2. For whom are the visualizations intended (learner, teacher, manager, researcher, other)?
3. How is data visualized? Which interaction techniques are applied? What tools, libraries, data formats, etc. are used for the technical implementations? What workflow and recipe was used to develop the visualization?
4. Why are the chosen visual approaches applied (i.e. rationale behind the application of a visualization)?
5. How has the approach been evaluated or how could it be evaluated?
6. What were the encountered problems and pitfalls during the visualization process?

The workshop is intended for anyone who is using, or is interested in visualization techniques to support learning analytics. The goal of our workshop is to build a strong research capacity around visual approaches to learning analytics. The longer term goal is to improve the quality of learning analytics research that relies on information visualization techniques.

During our 1-day workshop, we aimed to facilitate a very interactive and engaging event where we wanted to avoid death by powerpoint by all means and promote discussion activities over presentational ones. In the first half of the workshop, we therefore asked participants to shortly present the work of another submission and to relate it back to their own work.

During the second half of the workshop, we invited the participants to share their tools, workflows and recipes in a hands-on discussion session so that they could benefit from
each others’ knowledge, apply their visual approaches on either their own dataset or on a dataset that we provided.

Finally, we moved the discussion to the final topic of the workshop, which is the development of the equivalent of the VAST challenge for learning\textsuperscript{[1]}, which was linked back with the LAK14 and LAK15\textsuperscript{[2]} data challenge:

“The annual Visual Analytics Science and Technology (VAST) challenge provides Visual Analytics researchers, developers, and designers an opportunity to apply their best tools and techniques against invented problems that include a realistic scenario, data, tasks, and questions to be answered. Submissions are processed much like conference papers, contestants are provided reviewer feedback, and excellence is recognized with awards. A day-long VAST Challenge workshop takes place each year at the IEEE VAST conference to share results and recognize outstanding submissions.”

The VISLA15 organizers
Erik Duval, Joris Klerkx, Katrien Verbert, KU Leuven, Belgium
Martin Wolpers, Fraunhofer-Institute for Applied Information Technology FIT, Germany
Abelardo Pardo, University of Sydney, Australia
Sten Govaerts & Denis Gillet, EPFL, Switzerland
Xavier Ochoa, ESPOL, Ecuador
Denis Parra, PUC, Chile

# Table of contents

**Visualizing Uncertainty in the Prediction of Academic Risk**
*Xavier Ochoa*

**Using Sentence Compression to Develop Visual Analytics for Student Responses to Short Answer Questions**
*Aneesha Bakharia and Shane Dawson*

**Getting a Grasp on Tag Collections by Visualising Tag Clusters Based on Higher-order Co-occurrences**
*Katja Niemann, Maren Scheffel, Sarah León Rojas, Martin Wolpers, Hendrik Drachsler and Marcus Specht*

**A Network Based Approach for the Visualization and Analysis of Collaboratively Edited Texts**
*Tobias Hecking and H. Ulrich Hoppe*

**INSIGHT: a Semantic Visual Analytics for Programming Discussion Forums**
*Piyush Awasthi and I-Han Hsiao*

**Exploring Inquiry-Based Learning Analytics through Interactive Surfaces**
*Sven Charleer, Joris Klerkx and Erik Duval*

**Uncovering Learning Processes Using Competence-based Knowledge Structuring and Hasse Diagrams**
*Michael Kickmeier-Rust, Christina M. Steiner and Dietrich Albert*

**LAK Explorer – A Fusion of Search Tools**
*Mike Sharkey, Mohammed Ansari and Andy Nguyen*

**Discovering Learning Antecedents in Learning Analytics Literature**
*Vladimer Kobayashi, Stefan Mol and Gábor Kismihók*
