PROGRAM COMMITTEE
Luca de Alfaro, University of California Santa Cruz, USA
Dmytro Babik, James Madison University, USA
Eric Ford, Johns Hopkins University, USA
Ilya Goldin, 2U.com, USA
Bill Hart-Davidson, Michigan State University, USA
Zhewei Hu, North Carolina State University, USA
Steve Joordens, University of Toronto, Canada
Jennifer Kidd, Old Dominion University, USA
Da Young Lee, North Carolina State University, USA
Jay Loftus, Western University, Canada
Andrew Luxton-Reilly, University of Auckland, New Zealand
Pedro José Muñoz Merino, Universidad Carlos III, Spain
Julia Morris, Old Dominion University, USA
Joe Moxley, University of South Florida, USA
Katja Niemann, XING AG, Germany
Melissa Patchan, Georgia State University, USA
Lakshmi Ramachandran, Pearson, USA
Arlene Russell, University of California, Los Angeles, USA
Chris Schunn, University of Pittsburgh, USA
Marco Temperini, Sapienza University of Rome, Italy
David Tinapple, Arizona State University, USA
Yanqing Wang, Harbin Institute of Technology, China
Anita Woods, Western University, Canada
Ravi Yadav, North Carolina State University, USA

ORGANIZERS’ INTRODUCTION
Computer-supported peer review is becoming a more important component of the IT repertoire accessible to instructors around the world. All of the major learning management systems include a peer-assessment module, and there are dozens or even hundreds of standalone tools for peer assessment, notably Calibrated Peer Review™. Research on peer assessment is growing by leaps and bounds. A Google scholar search for “peer assessment” returns over 300 hits in the last year. However, the academic community behind these tools is spread across the curriculum. Education, psychology, and computer science have probably the largest representation, but English and the lab sciences have important contingents, because of their need to teach expository writing and technical writing to large numbers of students. Systems have also been developed by researchers in domains as diverse as business and arts and media.

Despite the breadth of interest, academic gatherings devoted to peer assessment of students by students have been rare. The first that we are aware of is the first CSPRED workshop, co-located with ITS 2010 in Pittsburgh. Since then, there have been two PRASAE (Peer Review, Peer Assessment, and Self Assessment in Education) workshops at learning-technologies conferences in Europe, the first associated with ICWL 2014 and the second with ICSLE 2015. The third workshop in that series will take place at ICWL 2016 in Rome.

Our intent was to bring together researchers from many of these fields. We received twelve submissions, of which eight (67%) were chosen for presentation at the workshop. The other authors with relevant and useful work were invited to condense their paper and produce a poster for display at a workshop session. The workshop also features a keynote by a veteran user of several different peer-assessment systems, and a panel on the timely issue of peer assessment and student privacy. We think that the workshop comprises a good cross section of work in this area, and we hope that the papers published here will be helpful to researchers and practitioners alike. Thank you for your interest in our work, and we hope to hear from you and establish fruitful collaborations!
