## PREFACE

These are the proceedings of the 10<sup>th</sup> International Workshop on Verification and Evaluation of Computer and Communication Systems (VECoS'2016) held the 6<sup>th</sup> and 7<sup>th</sup> of October 2016 at the Tunisia Polytechnic School that is the main organizer together with the support of Digital Research Center of Sfax, MeFoSyLoMa Group and Formal Methods Europe.

The International Workshop on Verification and Evaluation of Computer and Communication Systems (VECoS) was created by an Euro-Mediterranean network of researchers in computer science. Its first edition, VECoS 2007, took place in Algiers, VECoS 2008 in Leeds, VECoS 2009 in Rabat, VECoS 2010 in Paris, and VECoS 2011 in Tunis, VECoS 2012 in Paris, VECoS 2013 in Florence, VECoS 2014 in Bejaia and VECos 2015 in Bucharest.

The aim of the VECoS workshop is to bring together researchers and practitioners, in the areas of verification, control, performance, quality of service, dependability evaluation and assessment, in order to discuss the state-of-the-art, the new developments and the challenges in modern computer and communication systems in which functional and extra-functional properties are strongly interrelated. Thus, the main motivation for VECoS is to encourage the cross-fertilization between the various formal verification and evaluation approaches, methods and techniques, especially those developed for concurrent and distributed hardware/software systems.

Beyond its technical and scientific goals, another main purpose of VECoS is to promote collaboration between participants in research and education in the area of computer science and engineering. We welcome contributions describing original research, practical experience reports and tool descriptions/demonstrations in the areas of verification, control, performance, quality of service and dependability evaluation.

The invited speakers for VECoS 2015 are: Eric Badouel from SUMO, IRISA Rennes and Serge Haddad from LSV, ENS Cachan, France.

We received 26 contributions which have been thoroughly reviewed for originality, significance and relevance (108 reviews in total). For each paper three to five reviews were made. The program committee has accepted 13 papers for full presentation.

Without support of our academic and corporate sponsors, the enormous effort of authors, reviewers, steering committee and the local organizational team this tenth workshop wouldn't provide such an interesting program. We would like to thank all these persons.

We also thank the authors for their submissions and the program committee members for their hard work.

October 2016
