This second edition of the workshop aims at bringing together academics and practitioners from different areas to promote the vision of social media as social sensors. Nowadays, social platforms have become the most popular communication system all over the world. In fact, due to the short format of messages and the accessibility of these systems, users tend to shift from traditional communication tools (such as blogs, websites and mailing lists) to social network for various purposes. Billions of messages are appearing daily in these services such as Twitter, Tumblr, Facebook, etc. The authors of these messages share content about their private life, exchanging opinions on a variety of topics and discussing a wide range of information news.

Even if this system cannot represent an alternative to the authoritative information media, considering the number of its users and the impressive response time of their contributions, they represent a sort of real-time news sensor that can also predate the best newspapers in informing the web community about the emerging topics and trends. In fact, the most important information media always need a certain amount of time to react to a news event; i.e. professional journalists require time, collaborators and/or technology support to provide a professional report. However a user can easily report, in few characters, what is happening in front of the user’s eyes, without any concern about the readers or the writing style. These aspects make social services the most powerful sensor for events detection and automatic news generation. The aim of this workshop was to ask researchers to enter into such view, by studying how social platforms can be used in real-time scenarios to detect emerging events and enrich them with contextual information.
Workshop Organizers/Organizing Committee

Mario Cataldi                      Université Paris 8, France
Luigi Di Caro                      Department of Computer Science – University of Turin, Italy
Claudio Schifanella               RAI – Centre for Research and Technological Innovation, Turin, Italy

Workshop Programme Committee

Luca Aiello                      Yahoo! Labs, London
Andrea Ballatore                 University of California, Santa Barbara, USA
Iván Cantador                    Universidad Autónoma de Madrid, Spain
Federica Cena                    University of Turin, Italy
Martin Chorley                   Cardiff University, Wales
Emilio Ferrara                   Indiana University Bloomington, USA
Simon Harper                     University of Manchester, England
Dino Ienco                       Irstea, UMR TETIS, Montpellier, France
Séamus Lawless                   Trinity College Dublin, Ireland
Emmanuel Malherbe                Multiposting, France
Rosa Meo                         University of Torino, Italy
Ruggero G. Pensa                 University of Torino, Italy
Rossano Schifanella              University of Torino, Italy
Thomas Steiner                   Google, USA
Luca Vignaroli                   RAI – Centre for Research and Technological Innovation, Turin, Italy
