Foreword

With the increasing automation of business processes, growing amounts of process data become available. This opens new research opportunities for business process data analysis, mining and modeling. The aim of the IFIP 2.6 - International Symposium on Data-Driven Process Discovery and Analysis is to offer a forum where researchers from different communities and the industry can share their insight in this hot new field.

Submissions aim at covering theoretical issues related to process representation, discovery and analysis or provide practical and operational experiences in process discovery and analysis. Language for papers and presentations is English. In this sixth edition, 17 papers were submitted and 13 papers were accepted for publication in the pre-symposium volume. According to the format of a symposium the discussion during the event is considered a valuable element that can help to improve the quality of the results proposed or the approach in presenting results. For this reason, authors of accepted papers will be invited to submit extended versions of their articles to a post-symposium volume of Lecture Notes in Business Information Processing, scheduled in 2017.

Our thanks go to the authors who submitted to the conference, to the board of reviewers that made an deep work, and to those who participated in the organization or in the promotion of this event.

We are very grateful to the Università degli Studi di Milano, the Graz University of Technology, and the IFIP, for supporting this event.
