Preface

The CAiSE conferences provide a platform for presentation and exchange of research results and practical experiences within the field of Information Systems Engineering. The CAiSE Forum aims at introducing an Agora for the presentation of fresh ideas, new concepts, experience reports on application experiences and project reports, as well as demonstration of new and innovative systems, tools and applications.

We present results of innovative projects and prototypes as well as promising new approaches, and experience reports as short papers.

All papers submitted to this Forum have been reviewed by the CAiSE Forum Program Committee.

We received 27 submissions and 19 papers have been selected including 4 demonstrations. These papers have been organized in four sections : Workflow & Process, Data Bases & Evolution, MDE & Platforms and, Various.

The organization of such a Forum represents an important amount of work. We would like to acknowledge all the program committee members, all the additional referees, all the organization committee members, the Luxembourg National Research Fund, the University of Luxembourg and the LORIA administrative, scientific and technical staffs that helped us.
