International Workshop on
Petri Nets and Software Engineering

Satellite event of the
40th International Conference on
Application and Theory of Petri Nets
and Concurrency

19th International Conference on
Application of Concurrency to
System Design

1st International Conference on
Process Mining

Aachen, Germany, June, 2019
Editors: Daniel Moldt, Ekkart Kindler and Manuel Wimmer

Proceedings of the International Workshop on

Petri Nets and Software Engineering

PNSE’19

University of Hamburg
Department of Informatics
PNSE’19 Preface

These are the proceedings of the International Workshop on Petri Nets and Software Engineering (PNSE’19) in Aachen, Germany, June 24, 2019. The workshop is co-located to the events of

- *Petri Nets 2019* – the 40th International Conference on Applications and Theory of Petri Nets and Concurrency,
- *ACSD 2019* – the 19th International Conference on Application of Concurrency to System Design and

More information about the workshop can be found at [http://www.informatik.uni-hamburg.de/TGI/events/pnse19/](http://www.informatik.uni-hamburg.de/TGI/events/pnse19/)

For the successful realization of complex systems of interacting and reactive software and hardware components the use of a precise language at different stages of the development process is of crucial importance. Petri nets are becoming increasingly popular in this area, as they provide a uniform language supporting the tasks of modeling, validation and verification. Their popularity is due to the fact that Petri nets capture fundamental aspects of causality, concurrency, synchronization and choice in a natural and mathematically precise way without compromising readability. The use of Petri nets (P/T-nets, Coloured Petri nets and extensions) in the formal process of software engineering, covering modeling, validation, execution, simulation and verification, is presented as well as their application in several domains and tools supporting the disciplines mentioned above.

For the workshop we have chosen Jan Mendling and Hans Vangheluwe as the invited speakers. Their talks are *Quotients for Behaviour Comparisons: Monotone Precision and Recall Measures for Process Mining and Petri Nets in Multi-Paradigm Modelling*. Overall we received twenty high-quality contributions for these proceedings. The program now consists of five papers with long presentation, four papers with short presentation, two papers with poster contributions and the invited talks.

The international program committee of PNSE’19 was supported by the valued work of Łukasz Mikulski, Zbigniew Suraj and Tewfik Ziadi as additional reviewers. Their valuable work is highly appreciated. Furthermore, we would like to thank our colleagues in the local organization team at the RWTH Aachen University, Germany for their support. Without the enormous efforts of authors, reviewers, PC members and the organizational teams, this workshop would not provide such an interesting booklet.

Thank you very much!

Contents

Part I Invited Talks

Quotients for Behaviour Comparisons: Monotone Precision and Recall Measures for Process Mining
Jan Mendling ................................................... 11

Petri Nets in Multi-Paradigm Modelling
Hans Vangheluwe ............................................. 13

Part II Long Presentations

An asynchronous game on distributed Petri nets
Federica Adobbati, Luca Bernardinello and Lucia Pomello .......... 17

Towards extensible structural analysis of Petri net product lines
Elena Gómez-Martínez, Juan de Lara and Esther Guerra .......... 37

Solving $\mathbf{E} (\phi \cup \psi)$ using the CEGAR approach
Torsten Liebke and Karsten Wolf ................................ 47

On CTL Model Checking of the MQTT IoT Protocol using the Sweep-Line Method
Alejandro Rodríguez, Lars Michael Kristensen and Adrian Rutle .... 57

PNRD and iPNRD Integration Assisting Adaptive Control in a Block World Domain
Jose J. P. Z. S. Tavares and Gabriel De A. Souza ................. 73
Part III Short Presentations

Domain Name System (DNS) Tunneling Detection using Structured Occurrence Nets (SONs)
Talal Alharbi and Maciej Koutny ................................................. 93

Petri Meta-Compiler - a Recursive Approach to System Design and Development
Piotr Chrząstowski-Wachtel, Michał Doleżek, Paweł Greipner and Tomasz Wójcicki ......................................................... 109

A Petri Net Table Model Applied to Classic and Agile Project Management
Maxi Weichenhain and Wolfgang Fengler.................................... 127

Modelling Hybrid Cyber Kill Chain
Wen Zeng and Vasileios Germanos ............................................. 143

Part IV Poster Presentation

Simulating Place/Transition Nets by a Distributed, Web Based, Stateless Service
Jan Henrik Röwekamp, Matthias Feldmann, Daniel Moldt, Michael Simon ................................................................. 163

A First Prototype for the Visualization of the Reachability Graph of Reference Nets
Michael Simon, Daniel Moldt, Henri Engelhardt, Sven Willrodt .... 165
