Preface

The BPM 2010 Demonstration Track was held in conjunction with the 8th International Conference on Business Process Management (BPM 2010) on 14th-16th September 2010, in Hoboken, USA. This track showcased innovative BPM tools originating either from research initiatives or from industry, thus providing an opportunity to present and discuss emerging technologies with researchers and practitioners in the BPM field.

We received 26 submissions, of which 11 were intended as demo proposals only, and 15 also included a demo paper. In total, we accepted 20 demo proposals, of which 11 were demo papers. These proceedings contain the demo papers. These papers: (i) clearly state how the presented tools are innovative, (ii) describe their significance to the field of BPM, (iii) list their main features and specify their maturity level, and (iv), if applicable, include brief descriptions of case studies performed using these tools, and pointers indicating where readers can find more information about these case studies.

We would like to thank the authors for their submissions, our Reviewing Committee for their hard work and for submitting their reviews on time, and the organizers of the BPM 2010 conference for their support which made this demo track possible.

Brisbane, September 2010
