Workshop Proceedings

ACESMB 2010

Third International Workshop on Model Based Architecting and Construction of Embedded Systems

October 4th, 2010, Oslo, Norway

Organized in conjunction with MoDELS 2010
13th International Conference on Model Driven Engineering Languages and Systems

Edited by:
Stefan Van Baelen (K.U.Leuven - DistriNet, Belgium)
Ileana Ober (University of Toulouse - IRIT, France)
Huascar Espinoza (ESI Tecnalia, Spain)
Thomas Weigert (Missouri University of Science and Technology, USA)
Iulian Ober (University of Toulouse - IRIT, France)
Sébastien Gérard (CEA – LIST/LISE, France)
# Table of Contents

- Table of Contents .......................................................................................................................... 3
- Foreword ........................................................................................................................................... 5
- Acknowledgments ............................................................................................................................ 7
- Invited Talk - Using Metaheuristic Search for the Analysis and Verification of UML Models
  Lionel C. Briand (Simula Research Laboratory & University of Oslo, Norway) ............................... 9
- Mapping the MARTE UML Profile to AADL
  Skander Turki, Eric Senn and Dominique Blouin (Université de Bretagne-Sud, France) ............... 11
- A Time-Centric Model for Cyber-Physical Applications
  John C. Eidson, Edward A. Lee, Slobodan Matic, Sanjit A. Seshia and Jia Zou (University of California at Berkeley, USA) ................................................................. 21
- From Interaction Overview Diagrams to Temporal Logic
  Luciano Baresi, Angelo Morzenti, Alfredo Motta and Matteo Rossi (Politecnico di Milano, Italy) .. 37
- Virtual Verification of System Designs against System Requirements
  Wladimir Schamai (EADS Innovation Works, Germany), Philipp Helle (EADS Innovation Works, UK), Peter Fritzson (Linköping University, Sweden) and Christiaan J.J. Paredis (Georgia Institute of Technology, USA) ............................................................. 53
- Approach for Iterative Validation of Automotive Embedded Systems
  Gereon Weiss, Marc Zeller, Dirk Eilers and Rudi Knorr (Fraunhofer ESK, Germany) .................... 69
- Model Maturity Levels for Embedded Systems Development, or: Working with Warnings
  Martin Große-Rhode (Fraunhofer ISST, Germany) ........................................................................ 85
- Towards a Systematic Approach for Software Synthesis
  Hamid Bagheri and Kevin Sullivan (University of Virginia, USA) .............................................. 101
- Toward Mega Models for Maintaining Timing Properties of Automotive Systems
  Stefan Neumann and Andreas Seibel (University of Potsdam, Germany) ....................................... 107
- A Transformation-based Model of Evolutionary Architecting for Embedded System Product Lines
  Jakob Axelsson (Mälardalen University, Sweden) ......................................................................... 113
- Identifying Features for Ground Vehicles Software Product Lines by Means of Annotated Models
  Rafael S. Durelli, Daniel B. F. Conrado (UFSCAR, Brazil), Ricardo A. Ramos (UNIVASF, Brazil), Oscar L. Pastor (UPV, Spain), Valter V. de Camargo and Rosângela A. D. Penteado (UFSCar, Brazil) .......... 119
- Product Line Development using Multiple Domain Specific Languages in Embedded Systems
  Susumu Tokumoto (Fujitsu Laboratories Limited, Japan) .............................................................. 125
Foreword

The development of embedded systems with real-time and other critical constraints raises distinctive problems. In particular, development teams have to make very specific architectural choices and handle key non-functional constraints related to, for example, real-time deadlines and to platform parameters like energy consumption or memory footprint. The last few years have seen an increased interest in using model-based engineering (MBE) techniques to capture dedicated architectural and non-functional information in precise (and even formal) domain-specific models in a layered construction of systems. MBE techniques are interesting and promising for the following reasons: They allow to capture dedicated architectural and non-functional information in precise (and even formal) domain-specific models, and they support a layered construction of systems, in which the (platform independent) functional aspects are kept separate from architectural and non-functional (platform specific) aspects, where the final system is obtained by combining these aspects later using model transformations.

The objective of this workshop is to bring together researchers and practitioners interested in model-based engineering to explore the frontiers of architecting and construction of embedded systems. We are seeking contributions relating to this subject at different levels, from modelling languages and semantics to concrete application experiments, from model analysis techniques to model-based implementation and deployment. Given the criticality of the application domain, we particularly focus on model-based approaches yielding efficient and provably correct designs. Concerning models and languages, we welcome contributions presenting novel modelling approaches as well as contributions evaluating existing ones. The workshop targets in particular:

- Architecture description languages (ADLs). Architecture models are crucial elements in system and software development, as they capture the earliest decisions which have a huge impact on the realization of the (non-functional) requirements, the remaining development of the system or software, and its deployment. We are particularly interested in examining:
  - Position of ADLs in an MDE approach;
  - Relations between architecture models and other types of models used during requirement engineering (e.g., SysML, EAST-ADL, AADL), design (e.g., UML), etc.;
  - Techniques for deriving architecture models from requirements, and deriving high-level design models from architecture models;
  - Verification and early validation using architecture models.
• Domain specific design and implementation languages. To achieve the high confidence levels required for critical embedded systems through analytical methods, in practice languages with particularly well-behaved semantics are often used, such as synchronous languages and models (Lustre/SCADE, Signal/Polychrony, Esterel), super-synchronous models (TTA, Giotto), scheduling-friendly models (HRT-UML, Ada Ravenscar), or the like. We are interested in examining the model-oriented counterparts of such languages, together with the related analysis and development methods.

• Languages for capturing non-functional constraints (MARTE, AADL, OMEGA, etc.)

• Component languages and system description languages (SysML, MARTE, EAST-ADL, AADL, BIP, FRACTAL, Ptolemy, etc.).

We accepted 11 papers for the workshop from 10 different countries: 6 full papers and 5 position papers. We hope that the contributions for the workshop and the discussions during the workshop will help to contribute and provide interesting new insights in Model Based Architecting and Construction of Embedded Systems.

The ACES\textsuperscript{MB} 2010 organising committee,

Stefan Van Baelen,
Ileana Ober,
Huascar Espinoza,
Thomas Weigert,
Iulian Ober,
Sébastien Gérard.

The ACES\textsuperscript{MB} 2010 steering committee,

Mamoun Filali,
Susanne Graf.

September 2010.
Acknowledgments

The Organising Committee of ACESMB 2010 would like to thank the workshop Programme Committee for their helpful reviews.

Nicolas Belloir (LIUPPA, France)

Sergio Yovine (VERIMAG, France)

This workshop is organised as an event in the context of

- The IST-004527 ARTIST2 Network of Excellence on Embedded Systems Design
- The research project EUREKA-ITEA EVOLVE (Evolutionary Validation, Verification and Certification)
- The research project EUREKA-ITEA VERDE (Validation-driven design for component-based architectures)
- The research project EUREKA-ITEA OPEES (Open Platform for the Engineering of Embedded Systems)
- The research project ICT-INTERESTED ((INTERoperable Embedded Systems Tool chain for Enhanced rapid Design, prototyping and code generation)
