Joint Workshop on Scalable and High-Performance Semantic Web Systems (SSWS + HPCSW 2012)

At the 11th International Semantic Web Conference (ISWC2012), Boston, USA, November, 2012
SSWS + HPCSW 2012 PC Co-chairs’ Message

For 2012, the 8th International Workshop on Scalable Semantic Web Knowledge Base Systems (SSWS2012) and the 2nd Workshop on High-Performance Computing for the Semantic Web (HPCSW2012) were merged together. This joint workshop focused on addressing broader scalability issues with respect to the development and deployment of knowledge base systems on the Semantic Web. Typically, such systems deal with information described in Semantic Web languages like OWL and RDF(S), and provide services such as storing, reasoning, querying and debugging. There are two basic requirements for these systems. First, they have to satisfy the application’s semantic requirements by providing sufficient reasoning support. Second, they must scale well in order to be of practical use. Given the sheer size and distributed nature of the Semantic Web, these requirements impose additional challenges beyond those addressed by earlier knowledge base systems. This workshop brought together researchers and practitioners to share their ideas regarding building and evaluating scalable knowledge base systems for the Semantic Web.

This year we received 11 submissions. Each paper was carefully evaluated by three workshop Program Committee members. Based on these reviews, we accepted seven papers for presentation. We sincerely thank the authors for all the submissions and are grateful for the excellent work by the Program Committee members.

November 2012

Achille Fokoue

Gregory Todd Williams
Rensselaer Polytechnic Institute, USA

Takahira Yamaguchi
Keio University, Japan
Additional Reviewers

Cong Wang
Wright State University, Ohio, USA

Kevin Lee
University of Aberdeen, UK
Table of Contents

FishMark: A Linked Data Application Benchmark .......................... 1
Samantha Bail, Sandra Alkiviadous, Bijan Parsia, David Workman,
Mark van Harmelen, Rafael S. Gonçalves and Cristina Carilao

The Combined Approach to OBDA: Taming Role Hierarchies using Filters 16
Carsten Lutz, İnanç Seylan, David Toman and Frank Wolter

Evaluation of Query Rewriting Approaches for OWL 2 .................. 32
Héctor Pérez-Urbina, Edgar Rodríguez-Díaz, Michael Grove, George
Konstantinidis and Evren Sirin

Triangle Finding: How Graph Theory can Help the Semantic Web .... 45
Eric Goodman and Edward Jimenez

Cascading Map-Side Joins over HBase for Scalable Join Processing .... 59
Alexander Schätzle, Martin Przyjaciel-Zablocki, Christopher
Dorner, Thomas Hornung and Georg Lausen

Scalable Nonmonotonic Reasoning over RDF data using MapReduce .... 75
Ilias Tachmazidis, Grigoris Antoniou, Giorgos Flouris and Spyros
Kotoulas

A Scalability Metric for Parallel Computations on Large, Growing
Datasets (like the Web) ......................................................... 91
Jesse Weaver
