

Preface

With the raise of Model-Driven Engineering (MDE), model transformations are more and more used as the automation technique in software engineering. After more than a decade of maturation, MDE can nowadays leverage software development within complex domains and for building large-scale systems, thanks to the recent theoretical foundations and emerging tool support. In this respect, the correctness of model transformations is one crucial requirement for the success of MDE. Despite some recent advances in this field, the work on the Verification & Validation (V&V) of model transformations still remains scattered, and a clear perspective on the subject is still an ongoing process.

The International Workshop on Verification of Model Transformations (VOLT) is one of the most accurate venues to offer researchers a dedicated forum to classify, discuss, propose, and advance verification techniques dedicated to model transformations. This third edition has been held as a half-day event of the STAF (Software Technologies: Applications and Foundations) federation of conferences on the July 21st, 2014 in York, U.K. Five contributions were accepted after a rigorous review process, addressing various topics such as tool support for OCL-based verification of transformations, completeness of Triple Graph Grammars, and language-independent verification of model transformations. The workshop's program consisted of the accepted papers presentation, keynotes shared with the hosting conference federation, and one open session dedicated to discussions.

We would like to thank the STAF 2014 organization for giving us the opportunity to organize this workshop, especially to the workshops chairs, Barbara Koenig (University of Duisburg-Essen, Germany), Yishai Feldman (IBM Haifa, Israel) and Dimitris Kolovos (University of York, U.K.), who were always very helpful and supportive. Many thanks to all those that submitted papers, and particularly to the presenters of the accepted papers. We also warmly thank the many participants who contributed to the open discussions with their remarks and experience. Last but not least, our thanks go to the reviewers and the members of the Program Committee, for their timely and accurate reviews and for their help in choosing and suggestions for improving the selected papers.

July 2014

Moussa AMRANI

Manuel WIMMER

Program Committee

Márk Asztalos	Budapest University of Technology and Economics, Hungary
Dider Buchs	University of Geneva, Switzerland
Antonio Cichetti	Malardalen University in Vasteras, Sweden
Benot Combemale	University of Rennes, France
Michalis Famelis	University of Toronto, Canada
Holger Giese	Hasso-Plattner-Institute, Germany
Martin Gogolla	University of Bremen, Germany
Jeff Gray	University of Alabama, USA
Esther Guerra	Universidad Autónoma de Madrid, Spain
Frank Hermann	University of Luxembourg, Luxembourg
Akram Idani	Laboratoire d'Informatique de Grenoble, France
Marouane Kessentini	University of Michigan, USA
Dimitrios S. Kolovos	University of York, UK
Leen Lambers	Hasso-Plattner-Institute, Germany
Kevin Lano	King's College London, UK
Tihamer Levendovszky	Vanderbilt University School of Engineering, USA
Levi Lucio	McGill University, Canada
Arend Rensink	University of Twente, Netherlands
Rick Saley	University of Toronto, Canada
Martina Seidl	University of Linz, Austria
Antonio Vallecillo	Universidad de Málaga, Spain
Hans Vangheluwe	University of Antwerp, Belgium / McGill University, Canada
Dániel Varró	Budapest University of Technology and Economics, Hungary
