

Table of Contents

Preface	iii
Program committee	v
Author index	vii
Keyword index	ix

1 Invited talk

Hard Combinatorial Problems: A Challenge for Satisfiability	1
<i>Ilias Kotsireas</i>	

2 Research papers

Towards Incremental Cylindrical Algebraic Decomposition in Maple	3
<i>Alexander Cowen-Rivers and Matthew England</i>	
Evaluation of Equational Constraints for CAD in SMT Solving	19
<i>Rebecca Haehn, Gereon Kremer and Erika Ábrahám</i>	
Refutation of Products of Linear Polynomials	33
<i>Jan Horacek and Martin Kreuzer</i>	
Non-linear Real Arithmetic Benchmarks derived from Automated Reasoning in Economics	48
<i>Casey Mulligan, Russell Bradford, James H. Davenport, Matthew England and Zak Tonks</i>	
A Practical Polynomial Calculus for Arithmetic Circuit Verification	61
<i>Daniela Ritirc, Armin Biere and Manuel Kauers</i>	
Unknot Recognition Through Quantifier Elimination	77
<i>Meesum Syed Mohammad and Prathamesh T. V. H.</i>	

3 Extended abstracts

New in CoCoA-5.2.4 and CoCoALib-0.99600 for SC-Square	88
<i>John Abbott, Anna Maria Bigatti and Elisa Palezzato</i>	
Constraint Systems from Traffic Scenarios for the Validation of Autonomous Driving	95
<i>Andreas Eggers, Matthias Stasch, Tino Teige, Tom Bienmüller and Udo Brockmeyer</i>	
Wrapping Computer Algebra is Surprisingly Successful for Non-Linear SMT	110
<i>Pascal Fontaine, Mizuhito Ogawa, Thomas Sturm, Van Khanh To and Xuan Tung Vu</i>	
SMT-like Queries in Maple	118
<i>Stephen A. Forrest</i>	
Techniques for Natural-style Proofs in Elementary Analysis	122
<i>Tudor Jebelean</i>
