Preface

The Special Interest Group on Knowledge Management, the Fachgruppe Wissensmanagement (FGWM), of the German Computer Science Society (GI) hosts the FGWM workshop. The research in this workshop addresses the development and application of intelligent knowledge and experience management systems. In particular, this involves experience/knowledge search and integration approaches, semantic web services and linked data, user experience management, agent-based and peer-to-peer knowledge management, or the combination of knowledge management with other system, concepts or areas, such as Industry 4.0 or IT-security.
